

FIRST ANNUAL REPORT

OF THE

New Mexico

Feed & Fertilizer Control Office

Fiscal year ending

June 30, 1930

By

F. E. OAKES

Deputy in Charge,

NEW MEXICO FEED & FERTILIZER CONTROL OFFICE

State College, New Mexico

November 15, 1930

First Annual Report of Feed & Fertilizer Control Office of New Mexico

FINANCIAL REPORT FEED & FERTILIZER CONTROL OFFICE

From December 20, 1929, to July 1, 1930

RECEIPTS

Commercial Feeding Stuffs tax tags and stamps.....	\$6940.85
Commercial Fertilizer tax tags and stamps.....	575.00
Commercial Fertilizer registration fees.....	145.00
	<hr/>
	\$7660.85

DISBURSEMENTS

Freight and Express	\$ 209.21
Furniture, furnishings and fixtures.....	390.10
Labor and office help	835.52
Postage	217.05
Refunds	17.50
Salaries	1266.68
Tax Stamps	913.70
Tax Tags	1831.19
Traveling expense	846.56
Miscellaneous	39.57
	<hr/>
Total Disbursements	\$6914.72
Balance	\$ 746.13

The Feed & Fertilizer Control Office for New Mexico was established in December, 1929, under the authority of the Commercial Feeding Stuffs Law, Chapter No. 154, and the Commercial Fertilizer Law, Chapter No. 151. These laws were passed by the 9th regular session of the legislature and were approved March 13, 1929, and made effective July 1, 1929. The enforcement work was passed by the Board of Regents of the New Mexico College of Agriculture and Mechanic Arts to the Feed Control Office. Since the office was opened, all possible effort has been made to make the laws effective. Preliminary lists of possible feed manufacturers and dealers were drawn up and copies of laws, explanatory circulars and registration blanks were sent to those included in the lists early in January. Registrations began arriving in this office by January 20 for both feeds and fertilizers.

INSPECTIONS

On March first sufficient information had accumulated in the office to show that inspections were justified. By June 30 practically all feed and fertilizer dealers in the state had been visited and in a number of towns second inspections had been made. Inspections disclosed many feeds and fertilizers not previously registered. Second inspections, in most cases, show feeds are registered, labeled, and tagged to comply with the law. The general attitude of the feed manufacturers and feed dealers of the state is good. They generally agree that there is more money for manufacturer, dealer, and consumer in feeds that meet a given standard than is to be found in feeds of doubtful value made after a new formula with each mix.

FERTILIZER REGISTRATIONS

There were a total of twenty-eight fertilizers registered on July 1. Since that time two additional registrations have been made. Since the fertilizer business for this season is over and new registrations are required the first of each year, there is nothing gained by giving this list at the present time. There were nine companies registering fertilizers this year. The law requires that all fertilizers shipped into this state be reported to this office. This provision has been taken care of by the manufacturers with the exception of one or two shipments which were made after the law was effective, but before the shipper had the information with regard to the New Mexico Fertilizer Law.

FEED REGISTRATIONS

A total of 807 feeds were registered in the New Mexico Feed Control Office on July 1, 1930. Of these feeds about 74% to 75% were registrations of feeds to be shipped in from other states, and only 25% to 26% of them were New Mexico registrations. This means, if total tax tags

sales are a criterion, that fully 90% of all commercial feeds sold in this state are manufactured outside New Mexico.

NEW MEXICO MANUFACTURERS 55% OF CHOP FEEDS REGISTERED

New Mexico manufactures, according to figures compiled in September, 55% to 56% of the chop feeds registered; the firms registering the bulk of these feeds are small, they grind only a limited amount of feed. Would say that fully 85% to 90% of all chop feeds were shipped from neighboring states. This figure does not include custom ground chops or those ground on farms for the manufacturer's own consumption (such feeds are exempt under the law).

REGISTRATION FIGURES SHOW POSSIBILITY OF DEVELOPMENT

These registration figures show the possibility of the development of commercial feed industry in New Mexico. It also emphasizes the great amount of money that is being sent out of the state for commercial mixtures, including freight, that could in many cases be more profitably mixed from New Mexico grains. Many of the New Mexico grains are shipped out of the state that could be mixed with concentrates and fed at home with more profit. Better to use home grown feeds with supplements than feeds no better at a considerably higher price.

SOME EXEMPTIONS

Farm feeds ground and fed on the farm where they are grown require no registration, nor is it necessary to have feeds registered to do custom grinding (grinding grain for the owner, the ground product all to be returned to him). All ground or mixed feeds must be registered, labeled, and tagged as required by the Feeding Stuffs law when they are to be sold. Feeds properly registered, labeled and tagged may be resold. Those without proper labels and tags are not saleable, and unless dealers purchase feeds that comply with the law, it may be necessary for the dealer to register them before he can sell them. Custom grinders can, by having registrations, cover those feeds that they wish to sell and those feeds that their customers wish to have ground and offer for sale.

ONE FUND FOR FEED & FERTILIZER FEES

Feed and fertilizer fees are deposited in the same account. Since the work under the two laws is grouped in the one office and in charge of the same administrative office, it has not seemed worth while to try to arrive at an arbitrary division of these funds.

FEEDS ANALYZED

The past season laboratory facilities have not been available to but a limited extent, and this through special arrangement. We have tested a limited number of cottonseed products, however. Out of the tests made, 50% of the products would not meet the guarantee on the label. In each case the manufacturer was notified, and in every case proper adjustment was made with the manufacturer for the grade of product received.

We are not reporting in this bulletin the persons whose products we found deficient for the reason stated above—that the tests made were limited and it is possible that other products were in as bad condition as

the products tested; we either missing or passing them up due to limited number of samples taken.

SHORT WEIGHT

We found one car of Cottonseed Cake and Meal that was short weight, and the Meal was short in protein as well. The Meal sacks averaged only 95 pounds gross; the Cake in this same car averaged 98 pounds gross. The dealer was instructed by the shipper to recondition this product up to the proper net weight and he received check for so doing, also check for refund due on account of lower grade product being shipped than was paid for.

REFUNDS

While refunds show a satisfactory attitude on the part of the shipper who has been caught putting either short weight or short protein products into this state, these refunds do not repair the damage done.

GUARANTEES MUST BE MET

Any product that will not meet the guarantee placed on the label must not be shipped into New Mexico. The customer purchasing feed is entitled to the quality of feed purchased and as covered by the guarantee of the manufacturer on the bag or label.

COMMERCIAL FEEDING STUFFS DEFINED

The New Mexico Feeding Stuffs Law defines feeds: "The term 'Commercial Feeding Stuffs' shall be held to include all feeding stuffs used for feeding livestock and poultry, except the following: (a) Whole seeds or grains, (b) Whole hays, straws, cottonseed hulls and corn stover, when unmixed with other materials, (c) All other materials consisting of 60 per cent or more of water."

All commercial feeds must be registered, carry a New Mexico tax tag or tax stamp and a label.

Information for registering feeds is included in the law and a circular containing necessary regulations under the law.

The tax tag or tax stamp is provided as a means of paying the expense necessary in administering the law.

THE LABEL A PROTECTION

The label is for the protection of manufacturer, dealer and consumer. It makes each manufacturer responsible for his own product and identifies each manufacturer's product with the dealer and consumer. The information required on the label is the consumer's means of telling what he is purchasing.

INFORMATION THAT MUST BE SHOWN ON LABEL

The New Mexico Feeding Stuffs Law, Section 2, requires that the following information be shown on the label: "Every lot or parcel of commercial feeding stuffs sold, offered or exposed for sale or distributed within this state shall have affixed thereto a tag or label in a conspicuous place on the outside thereof, containing a legible and plainly printed statement clearly and truly certifying:

- (a) The net weight of contents of package, lot or parcel,

- (b) The name, brand or trade mark,
- (c) The name and principal address of the manufacturer, or person responsible for placing the commodity on the market.
- (d) The minimum per centum of crude protein,
- (e) The minimum per centum of crude fats,
- (f) The maximum per centum of crude fiber,
- (g) Per centum of Nitrogen-free Extract,
- (h) The specific name of each ingredient used in its manufacture.

The crude protein, crude fat, and crude fiber shall be determined by the methods in force at the time by the Association of Official Agricultural Chemists of North America.

With every sack of feed covered by a label the feed must stand on its own merits. Fraudulent labeling is traceable to the manufacturer or person responsible for putting it on the market.

NET WEIGHT

The Net Weight of a sack of feed in New Mexico is 100 pounds and any sale of feed in amounts less than 100 pounds net must be by special contract. Tax tags or stamps are provided in 100 pound, 50 pound, 25 pound, 10 pound, and 8 1/3 pound sizes. Thus, tags or stamps are provided for the regular packages as commonly used by the feed trade. In the weights provided either a tax tag or a tax stamp should be attached to each package. The manufacturer makes a statement of the net weights he expects to use in his registration of each Feeding Stuff.

SHORT WEIGHT

Net weights are watched and where weights are found short, the manufacturer is subject to prosecution, due allowance being made for natural shrinkage.

REPORT SHORT WEIGHT OR POOR QUALITY TO CONTROL OFFICE

Dealers and consumers should report promptly to this office cases of short weight, poor quality, or misbranding. Such reports not only benefit the one reporting, but also make it possible to watch for such products in other parts of the state.

NAME, BRAND, OR TRADEMARK

The value of a good brand or trade mark is recognized. Such brands are protected by running a uniform quality. It is not permissible to use the same name or brand on several different grades of the same feed, or to build up a reputation under one guaranty, then to expect to cut the quality of the feed and still use the same name.

MANUFACTURER RESPONSIBLE FOR HIS OWN FEEDS

The name and address of the manufacturer, or person responsible for placing a feed on the market, on the label makes each person or firm responsible for its products. The label tends to eliminate the "fly by night" manufacturer, due to the identification of such feeds thus provided.

GUARANTEED ANALYSIS

Under guaranteed analysis are included the minimum amounts of protein, fat, and nitrogen-free extract, and the maximum amount of fiber which the feed is guaranteed to contain. These elements will be taken up

in turn below. The law recognizes in requiring a guaranteed analysis that the consumer is entitled to know the quality of product he is purchasing and that the guaranty must be met.

PROTEIN is the muscle building element of a feed, and is necessary in growth. In cases where other feeding elements are lacking, it may also become a part of maintenance food supply. Protein is the most expensive ingredient of any feed. It is present in large amounts in Blood Meal, Tankage, Meat Scraps, and Fish Meal. In smaller amounts it is found in Cottonseed Meal and Cake, Peanut Meal, Soy Bean Meal, Linseed Meal, and Coconut Meal. Other valuable protein concentrates are Brewers Dried Grains, Dried Buttermilk, Dried Skim Milk, Corn Germ Meal, Corn Gluten Feed, Corn Gluten Meal, and Wheat Germ. Some other feeds contain protein in amounts nearly if not equal to demands of the animal body.

FAT is the heat producing element in feeds, furnishing body fuel. Fat is generally accepted as producing 2.5 times more heat than is produced by carbohydrates. Excessive fat in feeds may be detrimental, especially if the fat is or becomes rancid.

CARBOHYDRATES are made up of FIBER and NITROGEN-FREE EXTRACT.

FIBER is the coarse woody portion of the feed. A large portion of the fiber in most feeds is undigestible. It is valuable, however, to a limited extent as bulk, giving more surface for digestion, especially with cattle. Poultry and hogs give best results with feeds low in fiber. Fiber is the cheapest element of a feed and sufficient fiber can usually be secured from roughages grown on the farm; as hay, corn stover, straw, cottonseed hulls, etc. It is poor feeding practice to pay concentrate prices for such fibrous feeds. Some of the common high fiber feeds often included in Mixed Feeds are alfalfa stem meal, dried beet pulp, head chops of the grain sorghums, oat by products (mostly oat hulls), and whole pressed cottonseed cake.

NITROGEN-FREE EXTRACT is composed of the starches and sugars present in a feed and is used for body maintenance and body heat. An excess of sugar and starch is stored in the animal body as fat. Proper fattening, however, requires an addition of protein to carbohydrates. Most of the common grains furnish a cheap source of carbohydrates but care needs to be taken in such feeds as contain too high fiber content.

AGRICULTURAL COLLEGE AUTHORITY ON FEEDING

The County Agricultural Agent and your Agricultural College are experimenting along feeding lines and can give you valuable advice with reference to use of concentrates with local grown feeds; also in the purchase of ingredients for Mixed Feeds.

FEED CONTROL LABORATORY AVAILABLE

Laboratory equipment has been installed for checking the guaranteed analysis of the feeds that are being sold in New Mexico. Provision is made in the law for a free report of results found on inspection samples (or samples taken by persons properly deputized to take official samples). Commercial samples; namely, those taken for and sent in by a firm or an

individual, the analysis of which can only benefit that individual, will be charged for at the following rates:

Protein -----	\$1.50
Fat -----	2.00
Crude Fiber -----	3.50
Nitrogen-free Extract { -----	.50
Ash -----	
Moisture -----	1.00
Complete analysis -----	7.50

(These prices are subject to change without notice).

Such analyses are valuable to the manufacturers of feeds that are to be registered, purchasers of cottonseed meal or cottonseed cake—the quality of which is doubtful (protein test recommended)—and to manufacturers who do not have Control laboratories for checking their products.

METHOD OF SAMPLING

Samples for analysis should be taken from a sufficient number of sacks to get a representative sample. If from feed in bulk, from sufficient places in the pile to represent the pile. Samples secured as noted above should be thoroughly mixed, halved, and quartered to give a sample of about one pound in weight. Samples sent to this office in tin or glass will be less likely to show a change due to loss in moisture.

SAMPLES FOR COMMERCIAL ANALYSIS MUST BE ACCOMPANIED BY CHECK

Commercial samples mailed for analysis to the Feed & Fertilizer Control Office, State College, New Mexico, should be accompanied by money order or check to cover the analysis desired. Checks must be made payable to Feed & Fertilizer Control Office.

As stated above under sections of the law, our analyses must be made under methods in force at the time by The Association of Agricultural Chemists of North America.

LIST OF INGREDIENTS

The specific name of each ingredient used in a feed must be declared. The list of ingredients thus declared is useful to the consumer in deciding on the feed that will meet his feeding requirement. In addition to being listed, ingredients of little or no feeding value must show the per cent of such ingredients included.

THE LIST OF INGREDIENTS IS VALUABLE IN EVALUATING PRICE

Study carefully the list of ingredients in feeds. Where the guarantee approximates the average analysis of the more common ingredients it is well not to give too much weight to the effect or amount of freak ingredients.

READ YOUR FEED LABELS

The full information as required on feed labels is important. Care should be taken to read the label. The information required on the label for feeds sold in New Mexico is:

Net weight,
Name of Feed,
Name and Address of Manufacturer,
Guaranteed analysis,
List of Ingredients.

FEEDS MUST BE REGISTERED

Before feeds are saleable in this state, they must be registered in the New Mexico Feed Control Office. The application for registration when accepted becomes the registration. The registration carries information that must appear on the label for that feed. The list of ingredients carried in the registration is also the list of ingredients that is used in the formula for that feed. In other words, the list of ingredients must be the same in the registration, label and the feed as compounded.

CERTIFICATE OF REGISTRATION

The certificate of registration reads: "This certifies that the above named applicant is hereby licensed to sell one brand of commercial feed in the state of New Mexico until cancelled for cause, when sold, offered or exposed for sale under the brand name, guaranteed analysis and declaration of ingredients exactly as they appear above." This statement is clear. No changes are authorized in a feed without first making such change in the registration on file in the Feed Control Office. Reasonable changes in a registration will be accepted, but we cannot authorize changes that will reduce the quality of the feed. After changes are authorized, the label and formula must be made to agree with the changed registration.

FEED CONTROL OFFICE DOES NOT RECOMMEND FEEDS

It is the business of the Feed Control Office to register feeds, see that the net weight, list of ingredients and guaranteed analysis declared are correct, and to see that the requirements for tax tags and labels are properly taken care of. The guaranteed analysis and list of ingredients required on the label on each commercial feed are for the protection of the purchaser and should be read carefully. The specialists employed by your Agricultural College are in touch with feeding practice and results and can give you first hand information. Feeding practices recommended by these specialists may be safely adopted.

CAKE & CUBE FEEDS

The original use of the word CAKE as applied to feeds was with such feeds as Cottonseed Cake and Peanut Cake. The American Association of Feed Control Officials' definition for Peanut and Cottonseed Cake allows a minimum guarantee of 36% protein.

CUBE FEEDS CONTAIN 11% TO 36% PROTEIN

There are cube feeds on the New Mexico market carrying from 11% to as high as 36% of protein, but which are not entitled to be called CAKE, and the practice of calling such feeds "Cake" is to be discouraged as being misleading. Cube feeds are convenient for range feeding, but *the purchaser should not be misled into purchasing a low grade feed (cube, or otherwise) at the price of a high grade feed.*

Labels are attached to each sack of commercial feed for the purpose of acquainting the customer with actual content of each bag of feed sold.

FEEDS REGISTERED SEPARATELY

Since only one feed can be registered on a single registration blank,

only one feed is saleable under that registration and the labels called for under that registration.

CHOPS OR CHOP FEED

The New Mexico Feeding Stuffs law requires that all chop feeds be registered, labeled and tagged regardless of the source of manufacture, if they are offered or exposed for sale.

Exemptions under the law are: "Whole seeds or grains, whole hays, straws, cottonseed hulls, and corn stover when unmixed with other materials; and all other materials consisting of 60% or more of water."

The exemptions cited above do not exclude the chop feeds where they are offered for sale, but the law does through the medium of sale eliminate feeds that are ground by the producer for feed for his own stock, or by the custom mill from the feeder's own grain for use by the original owner as feed for his stock. This would allow the custom grinder to sell his grinding service, but not GROUND PRODUCTS, unless they are properly registered.

The exemptions permit the sale of all farm grains as produced, but places the producer under the same regulations as the manufacturer where the grain is ground or its original identity is destroyed by grinding or mixing with other grains or materials.

Many producers in the past who owned grinders have made a practice of grinding their grains and selling the ground grain or chops to their neighbors; or in fact, to anyone who would take it. Under the provisions of the law anyone grinding and selling a ground feed becomes a manufacturer and must register and label his product the same as any other manufacturer before such sale.

Truck owners who make a practice of buying in one part of the state and trucking to another part of the state should be careful to see that the ground feeds they buy are registered and labeled to meet the requirements of the Feeding Stuffs Law before they attempt to sell them in another part of the state.

Feed that is registered and labeled in accordance with registration and covered with proper New Mexico tax tags or stamps is saleable in any part of New Mexico.

Under the commercial Feeding Stuffs law, feeds of merit command prices in keeping with the quality shown. Those feeds of doubtful ingredients or feeding elements are thrown on their merits.

The tag label must show net weight, name of feed, name and address of manufacturer, guaranteed analysis and list of ingredients to agree with registration.

FEED MANUFACTURERS AND DEALERS

Since there is a demand for lists of feed manufacturers who have feeds registered in New Mexico, we are including a list of all the manufacturers who have feeds registered in this state; and when these feeds are covered with proper labels and tax tags, they are saleable.

Space will not permit the showing of the complete list of ingredients, but the guaranteed analysis is shown as registered by the manufacturer.

FEEDS REGISTERED IN NEW MEXICO FEED & FERTILIZER CONTROL OFFICE UP TO AND INCLUDING NOVEMBER 15, 1930

	Prot.	Fat	Fib.	N. F. E.
